

● A personal kanban board built for you, not your company

 KanTrack

KanTrack

Organize your work your way.

KanTrack is a browser-based kanban board built for individuals — not teams, not managers, not dashboards. Your tasks, notes, and plans stay on your device. Nothing is sent anywhere unless you choose to export it.

✗ No account

✗ No cloud dependency

✗ No tracking

✗ No setup

Open it at kantrack.com. Start working. That is the entire setup process.

THE PROBLEM

Work tools were built for organizations. Not for you.

Jira tells your company what is happening. Notion stores your team's knowledge. Asana tracks your sprint against goals set by someone else. None of them were built to answer the question you ask every morning.

"What should I do right now?"

Too many dashboards

Tasks scattered across Jira, Slack, email, and sticky notes. No single clear view.

Tools that watch you

Enterprise software measures your output and reports it upward. You are the subject, not the user.

Your data is hostage

Vendor lock-in, sudden price hikes, account requirements. Your work is trapped in someone else's system.

Most professionals already maintain a hidden layer of personal systems — a private notebook, a text file, sticky notes — just to stay sane. KanTrack formalizes that private layer into a purpose-built tool that is entirely yours.

Your personal command center for work.

A calm, focused planning surface that helps you see everything you are working on in one place. Four columns: To Do, In Progress, On Hold, and Done. Move tasks as work progresses. Attach the context that matters.

KanTrack is for you

✓ Personal workflow clarity

One honest view of what you are working on right now.

✓ Private by default

Nothing leaves your device. No account needed. Works offline.

✓ Yours to keep

Full export at any time. No lock-in. Ever.

KanTrack is not

✗ A team management tool

No dashboards for managers. No performance reports.

✗ A surveillance system

No behavioral analytics. No telemetry. No cookies.

✗ A gamified task app

No streaks. No scores. No urgency engineering.

Built by **BTi — Bossless Tech Industries**, a small studio with one governing idea: software should serve the person using it.

Your Work, Visible

An immediate, honest picture of where everything stands — at a glance.

Kanban board

Four columns — To Do, In Progress, On Hold, Done — with drag-and-drop between states.

Priority system

High, Medium, Low with colour tinting and automatic column sorting. Critical work rises to the top.

Due dates

Overdue and "due today" indicators on cards. Nothing slips past quietly.

Tags

Colour-coded labels with a preset palette or custom hex. Pin your most-used tags for fast assignment.

Search & filter

Full-text search with tag and column filters. Column counts update live as you filter.

Card sizes

Small, Medium, or Large — a global setting that scales the board to your screen and style.

Built to Think

Most tools track tasks. KanTrack is designed to carry the context behind them.

Rich task notes

Bold, italic, strikethrough.
Paste images directly —
stored locally, viewable full-
screen with zoom.

Edit history

A chronological log of every
change inside a task. Always
know how your thinking
evolved.

Sub-kanban boards

Each task holds its own
collapsible mini board. Break
complex work into steps
without top-level clutter.

Task timer

Per-task time tracking with
quick-add and quick-remove.
Track effort without
interrupting your flow.

Undo & redo

Full history backed by
IndexedDB — survives page
reloads. Trash provides soft-
delete with restore.

Keyboard shortcuts

N new task · **/** search · **?**
shortcuts · **↑↓←→** navigate ·
Ctrl+Z undo

Private by Design

This is not a feature. It is the foundation everything else is built on.

Local-first storage

Everything lives in your browser's IndexedDB and localStorage. Nothing is transmitted, synced, or logged anywhere.

Browser-enforced CSP

A strict Content Security Policy blocks all third-party scripts and network connections at the browser level.

Fully offline

No CDN dependencies at runtime. Every asset is bundled. Works without an internet connection.

Storage monitoring

Calm notice at 70% quota, backup prompt at 85%. Requests durable storage permission to protect your data.

No analytics. No telemetry. No cookies.

Not ever. Not in a future update. This is a design rule, not a policy.

Privacy is the default state

You do not configure it. You do not opt in. It is simply how the application works.

FEATURE HIGHLIGHT

Yours to Keep

KanTrack will never hold your data hostage. Export and move freely, always.

PDF export

Export individual tasks or notebook pages as PDF on any platform, including Mac.

HTML snapshot

Export your entire board as a static HTML file with all task data and images embedded.

Encrypted export

AES-256-GCM encrypted `.kantrack.enc` files for secure backup and archiving.

Full JSON export

Complete board export with embedded images — readable without KanTrack if you ever move on.

Import

Restore from any previous export. Merge mode adds to your board; replace mode starts fresh.

No lock-in

An app should not become a trap. Your data is yours. If you leave, it leaves with you.

FEATURE HIGHLIGHT

The Details That Matter

The features that make KanTrack feel complete once you live in it daily.

Notebook sidebar

A resizable panel with folder and page tree. Rich text, image paste, per-page PDF, drag-drop reordering, and live search.

Trash & restore

Soft-delete with restore. Nothing is gone permanently until you choose to empty the trash.

World clocks

Track multiple time zones and run a chronometer alongside your work.

WHY IT MATTERS

What Sets KanTrack Apart

The local-first software movement is a direct response to the structural problems of centralized cloud tools — breaches, lock-in, surveillance by default. KanTrack sits at that intersection.

If Jira tracks projects, KanTrack tracks your day.

Privacy enforced at the browser level

Individual-first not organization-first

Local-first architecture

No vendor lock-in

Open source

Complements your existing tools

KanTrack does not replace Jira, Notion, or Asana. Those tools answer organizational questions. KanTrack answers the individual question they were never designed to address.

Built on principles that do not drift

Every engineering decision is governed by public philosophy documents. Growth pressure, investor expectations, and feature creep cannot override them.

The road ahead: an optional encrypted vault for cross-device backup and sync, and a future desktop mode for unlimited local storage. Paid tiers will extend capability without removing freedom. That is a design rule, not a marketing position.

KanTrack is built by **BTi — Bossless Tech Industries**, a small studio of builders with a background in cybersecurity and a shared conviction: practical software should feel great to use and never work against the person using it.

● Free. No signup. Ready immediately.

Try KanTrack Now

Open it in any modern browser. Add your first task, move it across the board, open the detail view and start writing notes. Everything you create stays on your device.
